 Subject: ePlus Patent Litigation - 6.1 RQ program compile information
 Attachments: image001.png; image002.png; image003.png; image004.png

One of Jeff's requirements is to provide information about the server and programs that the Lawson 6.1 system is running on for his "demonstration". It's running on a currently supported IBM i (AS/400) server which is running OS/400 V5R4:

However, as you can see below, the compiled object (binary) was created on 01/29/99 and the "System Level" it was compiled on is the very old V4R2M0 release.

Also, the actual compile date of an example "RQ" program will be helpful (including the "Source file change date/time", the "Program creation date/time", and the "Earliest release that program can run", etc.):

This screen shows the "System level" and "Compiler" that Requisitions Maintenance program was compiled on:

All other programs included in the demonstration should have similar dates.

Hope this helps.
